

Anil Karaca

OPEN TO FRONTEND, MOBILE, AND PRODUCT
ENGINEERING ROLES

Frontend and mobile developer with strong product instincts and a journalism background that improves clarity, prioritization, and user communication.

anilkaraca140@gmail.com / anilkaraca.com / [GitHub](#)

I build interfaces and apps that make complicated ideas feel clear, useful, and shippable.

I ship React Native, Expo, React, and Astro work with a strong bias toward product clarity and execution. My journalism background makes me especially effective on content-heavy, data-heavy, or audience-facing products.

Primary stack: React Native, Expo, React, Astro, JavaScript | **Best fit:** Frontend, mobile, and editorial product teams | **Differentiator:** Strong writing, analysis, and product communication

TARGET ROLES	CORE STRENGTHS	KEY LINKS
Frontend developer	Product-minded implementation	Portfolio
Product engineer	Content-aware UX decisions	Developer lane
Mobile developer	Fast iteration under constraints	Contact
		GitHub

Best fit for teams that value clarity, communication, and shipping discipline alongside code quality.

SELECTED EXPERIENCE

The common thread is product delivery shaped by editorial clarity and limited-resource execution.

Independent app developer and data journalist

2025 - Present

Self-directed work | 2025 - Present

- Shipped consumer-facing mobile apps while continuing interactive editorial work.
- Used AI-assisted workflows for speed while keeping final implementation and scope decisions disciplined.

Communications advisor

2024

Izmir Metropolitan Municipality and Izbeton | 2024

- Built digital story packages and documentary work with strong audience and delivery constraints.
- Developed a practical sense for prioritization, pacing, and communication in public-facing products.

Senior digital journalist

2014 - 2024

BirGun, dokuz8HABER, Egede SonSoz | 2014 - 2024

- Created custom storytelling experiences that required editorial and technical execution together.
- Worked close to content, audience, and product needs rather than isolated engineering tasks.

SELECTED BUILDS

Projects chosen to show product judgment, not just code samples.

Yeser

Wellness app focused on repeat journaling, habit support, and clean mobile UX.

ChoreUs

Gamified household coordination app designed around participation and retention mechanics.

AI Fit Check

Consumer mobile app exploring AI-assisted feedback inside a playful product experience.

Parliament Analysis

React and D3.js interface for exploring parliamentary data as an editorial product.

Attack on Ozgur Ozel

Scrollytelling landing page built as a custom storytelling UI rather than a standard article.

TOOLKIT

The toolkit I use to move from concept to shipped interface.

Frontend and mobile	React Native, Expo, React, Astro, JavaScript, TypeScript, and practical UI implementation.
Product workflow	Rapid scoping, interaction design, content-aware UX, and AI-assisted iteration where it improves delivery speed.
Supporting data skills	Python and analysis workflows for transforming raw inputs into usable product and visualization layers.

This version foregrounds shipped apps and product execution while keeping editorial product work visible as a differentiator.
